 F: 9:00- 10:59 am Vandyke Classroom 201

C. Course Description:

This course introduces the principles of water management (quantity and quality) with emphasis on fresh water resources for domestic and multipurpose utilization. In addition, it presents and discusses the quality, treatment, reclamation and recycling of wastewater. Further, the course presents and discusses national and international guidelines, standards, and directives for water and wastewater management.

D. Course Learning Objectives (LOs): By the end of the course , students will be able to:

LO1	
LO1a.	Comprehend the Concept of Water Safety and Evaluate Water Safety Practices.
LO1b.	Define Basic Water Requirements/ (BWR), its relation to burden of disease, and describe categories of water-related diseases.
LO1c.	Plan the investigation of a waterborne disease outbreak, analyze collected data and recommend environmental interventions.
LO1d.	Prioritize water and sanitation projects and define approaches to involve communities in planning, implementing and sustaining such projects.
LO2	
LO2a.	Identify and describe natural and anthropogenic factors influencing water quality and quantity.
LO2b.	Describe and comprehend components of integrated water resources management.
LO3.	Comprehend the significance of the physical, chemical, microbiological and radiological characteristics of potable water supplies, and identify and describe the steps for developing a potable water supply project.
LO4.	Identify and describe conventional and advanced water treatment processes and quality monitoring protocols.
LO5.	Identify and describe factors influencing wastewater quality, collection, treatment and reuse.
